**ALIETTE® WDG brand Fungicide**  
**For Use on Hops for Downy Mildew Control**

EPA Reg. No. 264-516

EPA SLN. No. ID-960013

## ***24(c) Supplemental Label***

### **FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF IDAHO**

This label and the federal label for this product must be in the possession of the user at the time of pesticide application. Follow all applicable directions, restrictions, and precautions on this supplemental label and the main EPA-registered label. It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

#### **SPECIFIC DIRECTIONS FOR USE**

- Crop/Site:** Hops
- Target Pest:** Downy Mildew (*Pseudoperonospora humuli*)
- Rate:** 2.5 to 5.0 lbs / Acre.
- Dilution Rate:** Use sufficient water to insure complete coverage of foliage.  
Do not use less than 10 GPA for aerial application.
- Method of Application:** Foliar spray.
- When to Apply:** Apply ALIETTE® WDG as a foliar spray. When conditions are favorable for disease development (warm and humid), applications should be made as follows: (1) when shoots are 6-12 inches high; (2) after training when vines are 5-6 feet tall; (3) approximately three weeks after the second application; and (4) during bloom. Aerial application may result in reduced control due to lack of canopy penetration and coverage. It should only be used in situations where ground application is impossible.
- Restrictions and Limitations:** Do not apply within 24 days of harvest (PHI = 24 Days).  
Do not apply more than 20 lbs/Acre per growing season.  
Do not feed hop refuse to animals.

**Note:** Bayer CropScience has determined that phytotoxicity from solubilized copper may occur if products containing copper are tank-mixed with ALIETTE® WDG or if unbuffered ALIETTE® WDG is applied to foliage with copper residues. Do not tank-mix with copper fungicides.

When applied prior to or after copper fungicides, the pH of ALIETTE® WDG should be raised to 6.0 or above with the addition of an alkaline buffer such as Potassium Carbonate (3 lbs Potassium Carbonate to 5 lbs ALIETTE® WDG) or DiAmmonium Phosphate (5 lbs DiAmmonium Phosphate to 5 lbs ALIETTE® WDG).

Adjuvants which enhance pesticide penetration may cause phytotoxicity when mixed with ALIETTE® WDG.

Mixing ALIETTE® WDG with surfactants or foliar fertilizers is not recommended. When ALIETTE® WDG is used in combination with any other pesticide, conduct a crop sensitivity test by spraying a few plants. Evaluate the sprayed plants 3-7 days after application for adverse effects.
